

ZyGoDigital provides ZyGoCaster-based streaming video over INMARSAT to Photo News Media for remote broadcasts within hurricanes.

Photo News Media broadcast live streaming video from Hurricane Dean in Mexico using only a laptop computer, camera and INMARSAT BGAN communications link. This lightweight, mobile equipment setup, using ZyGoCaster and ZyGoVideo laptop software allowed a single reporter to stream live video from remote locations without expensive logistics and electrical power support. ZyGoCaster/ZyGoVideo provides the required quality video at the low uplink bandwidth of the INMARSAT terminal so that real time video broadcasts can be delivered from remote locations.
